Project Success or Failure?

- Projects rarely fail due to purely technical issues
 - Often failure is due to non-technical, *human interaction* problems
 - Pressure to complete to a tight schedule often causes a team to
 - Take shortcuts
 - Use poor methods
 - Gamble on new languages, tools or techniques that promise “The World”!
 - Pressure from management can also have a detrimental effect
- ☞ *So - How do we organize and manage individuals and teams to get the “best” possible outcome?*

Lecture Overview

- Understanding People
 - Motivation Theory [10a]
 - Personality Types [10b]
- Building and Managing the Team [10c]
- Project Annoyances

Principal References

- Ian Sommerville, *Software Engineering* (8th Edition), Addison-Wesley, 2007, Chapter 25.

Understanding People

- In order that human activities can be managed or directed, it is necessary to understand people!
- Far too often managers focus too much on the tasks to be done rather than the people who will do them
- As in most things, a balance is needed

Roadmap

- Understanding People
 - **Motivation Theory [10a]**
 - Personality Types [10b]
- Building and Managing the Team [10c]
- Project Annoyances

Understanding Personalities Types

- Working with others can be difficult
 - But if you understand another person's behaviour, it helps you work towards common solutions
- Knowing something about personalities types can help you understand how other people act and think
 - Assists in planning, conflict resolution etc.
- For a team to function “best”, it is suggested that we need a *variety of personality types*, each contributing in their own way

Roadmap

- Understanding People
 - Motivation Theory [10a]
 - **Personality Types [10b]**
- Building and Managing the Team [10c]
- Project Annoyances

Effective Teams

- In an *effective* team, the output of the whole team is greater than the total of the output from each of the parts. (*De Marco and Lister*)
- Right kinds of tasks and working conditions are very important. What helps?
 - ☐ Team cohesion (“11 Freunde müsst ihr sein” - *Sepp Herrberger*)
 - ☐ Focus on “*good communication*”
 - ☐ Challenging (and rewarding!) goals
 - ☐ Goal tracking and feedback
 - ☐ Common working framework
- Conflict, confusion, and disagreement are all part of the team-building process. The act of working through issues together helps to create *team spirit*.

Successful Teams

Successful teamwork relies on

- Agreed team goals
- Established team-member roles
- A supportive environment in which to work
- A common teamwork process that facilitates work
- A plan for the work
- A mutual team commitment to the goals, roles and plan
- Open / free communication among all team members
- The mutual respect and support of all team members

Roadmap

- Understanding People
 - Motivation Theory [10a]
 - Personality Types [10b]
- **Building and Managing the Team [10c]**
- Project Annoyances

Common Team Problems

Most common problems for software teams

- Leadership
- Cooperation
- Participation
- Lack of Trust
- Quality
- Function creep (bells and whistles)

Reflect on these *vis a vis* the SCRUM process.

☞ *Projects are more likely to succeed when sufficient consideration is given to these aspects*

Roadmap

- Understanding People
 - Motivation Theory [10a]
 - Personality Types [10b]
- Building and Managing the Team [10c]
- Project Annoyances

Project Annoyances

- Assume team members are “idiots”
- Lack of trust towards team members
- Very inefficient use of resources (“waste of time”)
 - Meetings are a frequent resource of waste-of-time!
- (Autocratic) Management without respect
- Focus on “stupid things”
- Annoying (and frequent) emails
- Processes that hinder, rather facilitate project work

Meetings

- Are a necessary part of any team work
- Can be time-consuming
 - ☐ Have to be planned and scheduled properly!
 - ☐ But try to force brevity where possible!
- We suggest you use the **NEAT** principle:
 - ☐ N Need
 - ☐ E Expectations of outcome
 - ☐ A Agenda
 - ☐ T Time

☞ *No NEAT, no meeting!!!*
